Deuto-Speed® Green
Liquid Foot Bath
Deuto-Speed® Green

HOW IT WORKS

Deuto-Speed® Green cleans, hardens, and nourishes the hooves, thus preventing disease. The ready-to-use solution is a foot bath with no aggressive substances, which keeps the troughs and the feet of the cattle, sheep, and goats disinfected. This solution is designed to stick to the feet for a long time. It can also be used to treat individual animals by spraying the solution directly onto their hooves.

ADVANTAGES

- Resistance to these substances does not develop
- No risk of acid burns for animals
- Healthy livestock
- Safe for animals and farmers

Deuto-Speed® Green

USE

FIELD OF APPLICATION | FREQUENCY | AMOUNT
--- | --- | ---
Prevention | once a day, 5 days | 8 litres of Deuto-Speed® Green mixed with 200 litres of water in foot bath (4% solution)
Initial stages of foot disease | once a day, 10 days | 14 litres of Deuto-Speed® Green mixed with 200 litres of water in foot bath (7% solution)
Individual treatment | 1-2 times a day | 25% solution to be applied with sprayer
Milking parlour – tethering of cattle | 5-10 days | Spray a mix of one part Deuto-Speed® Green and one part water
After hoof trimming | Twice a year | Spray a mix of one part

Deuto-Speed® Green is a liquid foot bath which can also be sprayed on individual animals*. It consists of 1.5 Pentamethylene, Benzalkonium chloride, ammonium compounds, stabilisers, wetting agents and water. Deuto-Speed® Green contains no aluminium sulphate, no copper sulphate and no formalin. Deuto-Speed® Green is shipped in 25kg containers.

*Use besides safely. Always read the label and the product instruction carefully before use.

Baiard No. 4 358/18 (P)
OUR ANIMAL HYGIENE PRODUCTS WILL MAKE A DIFFERENCE IN YOUR SHEDS

Deuto-Dip® Yellow
A ready-to-use dip for manually disinfecting teats and keeping them healthy

Deuto-Ca®
A natural product of calcium compounds and anti-slip minerals used as a dry foot bath

Deuto-Mix®
A general use bedding powder for sheds

Our animal hygiene products do not leave any residues, which could interfere with anaerobic digestion, making them suitable for biogas plants.
